

KisanSetu — Master Defense & Jury Q&A Guide

Problem Statement ID: 26032 | Smart Automation | End-to-End Technical & Economic Defense

1. Problem Statement 1-to-1 Coverage (SIH ID: 26032)

1. Farmer Registration & Slot Booking

Dual-Channel System: Multi-step web portal booking + Full Voice IVR booking via toll-free phone call (1800-180-1551) for feature-phone users without internet.

2. Real-Time Queue Management

Live truck counter on digital gate pass ('3 trucks ahead at Gate #2') + Dedicated Mandi Officer Control Center to verify, scan and advance vehicle queues across 4 stages.

3. SMS & App Notifications

Instant Exotel SMS gateway integration sending token IDs to caller mobiles + 1-click WhatsApp digital pass share + In-app live sync.

4. Track Procurement & Payment Status

Official 2025-26 MSP calculator, DBT bank credit timeline tracking (48-72 hrs directly into Aadhaar-linked account), and pass status progression.

5. Reduce Congestion & Waiting Time

Staggered 2-hour capacity quotas (caps arrivals per window) + Moisture Pre-Check (17.0% limit) preventing wet crop rejection after long travel.

2. Cost & Unit Economics

Q: What is the exact operational cost per farmer booking?

Total Unit Cost: ~Rs. 0.45 per issued gate pass.

- IVR Voice Call: Standard cloud telephony (Exotel/Airtel) costs Rs. 0.35/min. Our flow completes in under 45s = Rs. 0.28 to Rs. 0.30.
- Transactional DLT SMS: Rs. 0.12 per message.
- Edge Serverless Compute: Rs. 0.0001 per request.

Funding Source: Easily funded by APMC Mandi Board cess (1-2% market fee) or the central Digital Agriculture Mission / PM-AASHA fund.

Q: What is the financial ROI for farmers?

- Fuel Savings: Eliminates 8-14 hours of tractor idling in highway queues, saving farmers Rs. 800 to Rs. 1,500 in diesel/rent per trip.
- Zero Middlemen Cuts: Protects farmers from arbitrary 3-8% 'moisture penalties' and 'queue cuts' imposed by middlemen.
- Spoilage Prevention: Eliminates overnight open-air parking in rain, preventing sudden grain rot.

3. Scalability, Architecture & Peak Season Traffic

Q: How does the system handle massive spikes during 3-week harvest seasons?

- Serverless Edge Infrastructure: Nitro and TanStack Edge Workers scale horizontally on-demand to 10,000+ requests per second without cold-start bottlenecks.
- Telephony Trunking: Enterprise SIP trunking supports over 10,000 concurrent voice channels.
- Quota-Driven Load Balancing: When a mandi's 2-hour arrival window fills to capacity, the engine automatically routes farmers to neighboring sub-mandis within a 15 km radius.

Q: What happens if there is an internet failure at the Mandi gate?

- Offline Gate Verification Mode: Tokens follow a cryptographic hash format (KS-XXXX). The Gate Officer's tablet runs a PWA with local IndexedDB cache, validating token authenticity and queue positions offline, syncing automatically once connectivity returns.

4. Rural Usability, Inclusivity & Fraud Prevention

Q: How do illiterate smallholders or farmers with basic button phones use KisanSetu?

- Zero-App Feature Phone Voice Line: Farmers dial 1800-180-1551 from any Rs. 1,000 keypad phone. Prompts are spoken in Hindi, Punjabi, Marathi, and English.
- DTMF Keypad Input: Dialing numbers (1 for Paddy, 2 for Wheat) has a 99.9% accuracy rate, completely unaffected by rural tractor noise or heavy accents.
- Voice Read-Back + SMS: The system audibly speaks the Token ID twice at the end of the call, followed by an immediate SMS receipt.

Q: How do you prevent slot hoarding or fake bookings by middlemen?

- Mobile & Aadhaar Binding: Every booking requires 10-digit mobile verification and Aadhaar last 4 digits.
- 1-Active-Pass Limit: A single farmer identity can only hold one active, unfulfilled pass per crop season.
- Land Holding Acreage Cap: Maximum quintals bookable are capped based on registered landholding records.

5. Quality Control, MSP & Moisture Pre-Check

Q: How does the Moisture Pre-Check (17.0% threshold) work?

- Village Pre-Check: The farmer enters the reading obtained from their local digital grain moisture meter.
- Exact Boundary Rules: $\leq 17.0\%$ is PASS (0% deduction) -> Fast-tracks to gate pass booking. $> 17.0\%$ is REJECTED (Sun Drying Required) -> Displays drying advice (2-4 hours on tarpaulin) before spending travel fuel.
- Official Notice: Explicitly states that official gate laboratory testing at Gate #2 is final.

Q: Which MSP rates and payment rules are integrated?

- Hardcoded with official Government CACP 2025-26 MSP Rates: Paddy Common (Rs. 2,300/Qtl), Paddy Grade A (Rs. 2,320/Qtl), Wheat (Rs. 2,425/Qtl), Mustard (Rs. 5,950/Qtl), Chana (Rs. 5,650/Qtl), Cotton (Rs. 7,521/Qtl).
- Direct DBT bank transfer expectation timeline (48-72 hours after weighbridge stamping).

6. Complete Tech Stack Overview

Full Technical Specifications

- Frontend: React 19, TypeScript, TanStack Start/Router, Tailwind CSS, Lucide Icons (PWA Caching & Multilingual).
- Telephony & Audio: Exotel Passthru, Web Audio API (DTMF tones), Web Speech API (TTS).
- Backend API: Nitro Serverless Engine, Node.js REST API routes.
- Hosting & Edge: Vercel Global Edge Network, Cloudflare SSL/DNS (Sub-50ms latency across India).
